

Dear Hiring Manager,

My name is Karandeep Virk I have worked a couple of years as a web developer and learned advanced software engineering processes after completing studies in computer science.

I learned lots of business process documentation which includes Flow charts, DFD diagrams, ER diagrams, and Database design. I got an opportunity to apply the software development process using the Waterfall model, Iteration model (Agile).

I participated in different web applications and learned JavaScript, HTML, CSS, MySQL and basic web development.

Then I immigrated to Canada in 2015 and got a job in Kelowna as a programmer where I learned core web designing and developed many responsive web applications in depth. I have developed eCommerce, and events booking applications integrated with various payments APIs such as PayPal Pro, Stripe, AuthorizeNet, Elavon, Solve 360, Constant Contact, Mail chimp, CheckFront, and Lasso and mastered JQuery, JavaScript, AJAX, PHP, SASS, CSS, Source Tree. I also did core WordPress, Custom CMS and Woo-Commerce Development and learned various Object oriented concepts. I also did lots of communication back and forth with the server with a JSON object.

I also got an opportunity to work on the Angular Project. I soon realized that JavaScript is dominating the web development market and started learning React JS. I also build a couple of free projects for local businesses to learn in react which includes eCommerce application.

I got an opportunity in Vancouver to work with alluraDirect where I learned React JS, ES6, TypeScript, SASS, Webpack, JIRA, Material UI, and GitHub to develop an Airbnb-type application with a property manager dashboard. I also reviewed the code of other developers. Since then I have been learning all the modern web technologies.

In my recent job I learned CI/CD pipeline, React Testing Library, React Renderer, Sonar Cloud, DevOps, MongoDB and worked as a front end developer.

I want to secure a challenging position in a reputable organization to expand my learning, and knowledge, develop new skills and learn emerging technologies. I have strong communication skills and the ability to manage multiple projects at one time. I can work independently and as part of a team.

I am a hard-working person, a quick learner, down to earth easy going person. I do cycling and love to travel around and try different restaurants.

Thanks for your consideration

Karandeep Virk
